now  
10 months

### E-commerce Flower Delivery Platform

[onahochet.ru](https://onahochet.ru)

Transportation, Logistics, Warehousing, International Logistics

- Courier, Mail Delivery

IT, System Integration, Internet

- Internet Company (Search Engines, Payment Systems, Social Networks, Information and Educational, Entertainment Resources, Website Promotion etc.)

Retail

- Internet Store

### Fullstack Developer

About the workplace:

A commercial e-commerce platform with multi-city logic, a catalog, product cards, a shopping cart, and a checkout process. The product is focused on online sales, order processing, city-based routing, and integration with external services.

Area of Responsibility:

Responsible for product development across both Frontend and Backend: designing and implementing user scenarios, developing APIs and business logic, integrating external systems, maintaining production, and optimizing key user flows.

Responsibilities:

Development and enhancement of fullstack functionality for the e-commerce platform: frontend scenarios, backend APIs, order business logic, integrations, and production support.

Development and enhancement of e-commerce functionality: catalog, product cards, shopping cart, checkout, and order placement scenarios.

Implementation of Backend logic using NestJS for order processing, integrations, and internal business processes.  
Designing REST APIs and ensuring stable interaction between Frontend and Backend parts of the application.  
Implementation of integrations with amoCRM, Telegram Bot API, MAX API, AWS S3, and third-party services.  
Support for multi-city architecture and regional storefront scenarios.  
Use of Redis for caching and accelerating specific scenarios.  
Regular SEO and performance optimization of the user-facing part of the application.  
Support for auth-flow, typed contracts, and stable interaction between client and server parts.  
Production environment support and product improvements without disrupting core business processes.

#### Achievements:

Designed and implemented key user scenarios for order placement, including address delivery, recipient details, and order preferences. Implemented payment processing systems. Delivered seamless CI/CD.  
Implemented integrations with CRM, Telegram, and MAX notifications, simplifying order processing and accelerating operational workflows.  
Streamlined Frontend and Backend interaction to a more predictable structure using typed contracts and unified API approaches.  
Improved the performance of specific pages and scenarios through caching, request optimization, and careful handling of SSR/CSR.  
Contributed to the evolution of the product architecture with a focus on scalability and future development of new business lines.

#### Tech Stack:

Next.js, React, TypeScript, NestJS, Node.js, PostgreSQL, Redis, TypeORM, REST API, JWT, Swagger/OpenAPI, TanStack Query, Mantine UI, amoCRM API, Telegram Bot API, AWS S3, Docker, SEO, Yandex Metrica, Yandex Products, VK Market, Dokploy, GitLab pipelines.

## Corporate and Product Web Interfaces

kascadspb.ru

Construction, Real Estate, Architecture

- Road and Infrastructure Construction
- Housing Construction
- Commercial Property Construction (Retail Spaces, Office Buildings)
- Industrial Construction
- Architecture, Design

## Frontend Developer / Mentor

#### About the workplace:

Development and evolution of a commercial web product and corporate interfaces with a focus on UI quality, codebase maintainability, and the speed of shipping new features.

#### Area of Responsibility:

Responsible for developing key interfaces, establishing a component architecture, integrating the Frontend with Backend contracts, and providing technical guidance to less experienced developers through code reviews and task breakdowns.

#### Responsibilities:

Development and maintenance of user interfaces using Next.js, React, and TypeScript.  
Establishing a reusable component architecture and maintaining UI consistency.  
Integrating the Frontend with the Backend via OpenAPI contracts and auto-generated clients.  
Ensuring code quality, readability, and predictability of the Frontend layer.  
Conducting code reviews and assisting junior developers with task analysis and implementation

approaches.

Participating in SEO optimization and improving page performance.

Collaborating with Design and Backend teams to align requirements and technical implementation.

Close collaboration at the intersection of Frontend and Backend contracts, strengthening the practice of typed client-server interaction in product development.

Achievements:

Introduced a more structured approach to working with API contracts, which simplified client-side maintenance and made Frontend-Backend interaction more predictable.

Assembled and standardized a set of reusable interface solutions, reducing code duplication and streamlining project development.

Strengthened engineering discipline within the team through code reviews and analysis of common pitfalls.

Improved the quality and maintainability of the Frontend codebase through strong typing, decomposition, and unified project structure approaches.

Accelerated the onboarding process for junior developers and reduced the recurrence of common implementation errors.

Tech Stack:

Next.js, React, TypeScript, Kubb, OpenAPI, Mantine UI, SEO, UI/UX, Code Review, Team Development.

## **Project-Based Development of Web Products and Business Solutions**

Educational Institutions

- Business Education

### **Fullstack Developer**

About the workplace:

Project-based development of web products tailored to the needs of small and medium-sized businesses: landing pages, corporate websites, admin panels, Telegram Mini Apps, AI automations, AI chats, internal tools, and custom web interfaces.

Area of Responsibility:

Responsible for managing projects from requirements gathering through to release: designing application architecture, developing both Frontend and Backend, integrating external APIs, deploying solutions, and providing post-launch support.

Responsibilities:

Fullstack development of web products on a turnkey basis: from landing pages and corporate websites to internal dashboards, admin panels, Telegram Mini Apps, and AI platforms.

Designing Frontend using React and Next.js, as well as Backend using Node.js and NestJS.

Implementing integrations with external APIs, CRMs, Telegram, OpenAI, and other services.

Configuring forms, lead processing, notifications, file storage, and basic business process automation.

Working with typed API contracts, Swagger/OpenAPI, and client hook generation.

Setting up authentication, callback handlers, access roles, and coordinated interaction between services.

Performing deployments, basic environment setup, and post-release support.

Working directly with clients: gathering requirements, estimating tasks, aligning on functionality, and shipping changes to production.

Achievements:

Delivered over 30 commercial and project-based web development assignments.

Covered the full development cycle — from initial concept discussions and architecture design through to release and ongoing maintenance.

Established a practical Fullstack approach, enabling confident work on both the user-facing part and server-side logic.

Developed and maintained several fullstack MVPs and product solutions: a business club Telegram

Mini App, an AI-powered career navigation platform, and an AI automation platform with chats and n8n workflow integration.

Implemented integrations with OpenAI, Telegram, and n8n, including callback handlers, result delivery to users, and end-to-end content generation processes.

Improved API security: data isolation by userId, user/admin access separation, callback and progress-callback protection via HMAC SHA-256 signature and idempotent event handling.

Configured CI/CD: building and publishing Docker images, webhook-based deployment to Dokploy, and pipeline and build stabilization.

Supported production projects: log analysis, root cause identification, rapid patching, and validation through local and CI builds.

Tech Stack:

Next.js, React, TypeScript, Node.js, NestJS, PostgreSQL, Redis, TypeORM, REST API, Swagger/OpenAPI, TanStack Query, Mantine UI, next-intl, Kubb, Telegram Mini App SDK, Telegram Bot API, OpenAI API, n8n, Docker, Docker Compose, GitLab CI/CD, Dokploy, AWS S3, API integrations.

Further information

About me

Fullstack Developer с 4+ годами коммерческой разработки веб-продуктов. Основной стек: React, Next.js, TypeScript, Node.js, NestJS, PostgreSQL, Redis, REST API, Docker. Развивал e-commerce платформы, Telegram Mini Apps, AI-автоматизации, AI-чаты, корпоративные интерфейсы и проектные веб-решения с интеграциями, бизнес-логикой,

production-поддержкой и CI/CD. Сильнее всего в задачах на стыке Frontend, Backend и продукта: проектирование архитектуры, пользовательских сценариев, API, интеграционных процессов и запусков в production. Есть опыт code review, менторства, performance optimization, настройки CI/CD, интеграции внешних сервисов и security-hardening API. Для ускорения разработки использую Codex, ChatGPT и DeepSeek: для декомпозиции задач, рефакторинга, анализа ошибок, подготовки документации и ускорения интеграционной разработки.
